AI TOOLS AND STUDENTS' UNDERSTANDING OF INTERNATIONAL ISSUES

Project Framework

Doğa Irmak Borçalan
56051

REASON FOR CHOOSING THIS TOPIC

I chose this topic because AI tools like ChatGPT, Gemini, and other platforms are becoming very common in daily student life.
Many students use AI to read news, understand global events, and learn about international issues.
I want to study how AI changes the way young people learn, think, and build opinions about the world.
This topic is modern, simple, and important for understanding new learning behaviors.

PROBLEM DEFINITION

Today, students receive information from many digital tools, and AI tools are one of the fastest-growing sources.
However, we do not know if AI helps students understand international issues better or creates confusion and misinformation.
The main problem is to explore whether AI improves global awareness or changes it in a risky way.

GENERAL FRAMEWORK OF THE RESEARCH

My project will focus on four simple areas:

1. How often students use AI tools
2. How AI affects their understanding of international events
3. How much they trust AI-generated information
4. The possible risks of using AI for global news

This framework helps me connect AI technology with students' knowledge about international issues.

AI USAGE AMONG STUDENTS

In this part, I will examine how students use AI tools in their academic and daily life.
I will look at their habits: reading news, checking facts, asking questions, and learning about global politics.
This section helps me understand the basic role of AI in students' information process.

UNDERSTANDING OF INTERNATIONAL ISSUES

Here, I will study whether AI helps students understand international conflicts, global politics, climate issues, and world events more easily.
I will also check if AI explanations make information more simple or more confusing.

TRUST AND RELIABILITY

In this part, I will focus on how much students trust AI.
Do they believe AI answers?
Do they compare AI information with traditional news sources?
This section will show the difference between AI-based learning and classical learning.

RISKS AND CHALLENGES

I will examine risks such as misinformation, biased answers, and over-dependence on AI.
I will also discuss how these risks may affect students' view of international issues in the long term.

PROJECT OUTPUT SHARING

1. GitHub Repository

I will create a public GitHub repository for my project.
It will include my research notes, survey results, short analyses, and the final report.
This makes the project easy to access and useful for other students.
It also shows the digital and modern side of my work.

2. One-Page Student Guide

I will prepare a short one-page guide called
“How to Use AI Tools Safely for Understanding International Issues.”
This guide will give simple tips for using AI in a correct and responsible way.
It will also help students learn global topics without misinformation.
This output makes the project more practical and helpful for everyday use.

METHOD AND WORK PLAN

My main method will be a short survey for university students.
I will ask simple questions about AI usage, trust, and understanding of international topics.
I will also use a small literature review to support the project.
In the first weeks, I will prepare the survey.
Later, I will analyze the answers and connect them with my topic.

CONCLUSION AND IMPORTANCE OF THE STUDY

With this project, I aim to understand how AI changes the way young people learn about the world.
AI tools are shaping global awareness, so it is important to study their effects on students.
My findings will help show whether AI is a helpful tool or a possible risk in understanding international issues.
