

Guide Had a Positive Effect

The guide appears to have been well received by the target audience with the vast majority of survey answers claiming it was easy to read, easy to navigate and easy to understand. This demonstrates that the guide was extremely user-friendly and did not present a barrier even for less tech savvy students. Another way to put it, it's easy to see how many of the main AI concepts had been communicated in a digestible format.

The majority of the survey respondents also admitted they now feel more comfortable critically thinking about using AI. This demonstrates that the guide not only was educational but instructional as it promoted a more critical perspective for students towards the topic of AI.

In addition to this, many students admitted that they are now more likely to cross reference any information they get from the AI. This demonstrates the guide was not only a success at being informative but that the skills it was teaching had also been transferred to the student.

The TRACE checklist and red flags also were found to be useful for critiquing information coming from the AI. This further illustrates how the red flags section helped turn general information about AI into practical steps for evaluating AI-generated content.

Overall, the guide successfully informed students about AI and assisted them in the establishment and growth of a critical approach to AI usage.
